

Package ‘pasilla’

October 17, 2019

Title Data package with per-exon and per-gene read counts of RNA-seq samples of Pasilla knock-down by Brooks et al., Genome Research 2011.

Version 1.12.0

Author Wolfgang Huber, Alejandro Reyes

Maintainer Alejandro Reyes <alejandro.reyes.ds@gmail.com>

Description This package provides per-exon and per-gene read counts computed for selected genes from RNA-seq data that were presented in the article “Conservation of an RNA regulatory map between Drosophila and mammals” by Brooks AN, Yang L, Duff MO, Hansen KD, Park JW, Dudoit S, Brenner SE, Graveley BR, Genome Res. 2011 Feb;21(2):193-202, Epub 2010 Oct 4, PMID: 20921232. The experiment studied the effect of RNAi knockdown of Pasilla, the Drosophila melanogaster ortholog of mammalian NOVA1 and NOVA2, on the transcriptome. The package vignette describes how the data provided here were derived from the RNA-Seq read sequence data that are provided by NCBI Gene Expression Omnibus under accession numbers GSM461176 to GSM461181.

Index	3

pasillaExons

Read counts per exon, or per gene, from RNA-seq samples

Description

pasillaExons is an ExonCountSet object containing exon counts for each of the samples from Brooks et al.'s RNA-seq data. pasillaGenes is an CountDataSet object with gene level counts. dxd is a DEXSeqDataSet object with exon counts, the ExonCountSet has been deprecated and substituted by the object DEXSeqDataSet the object.

Usage

```
data("pasillaExons")
data("pasillaGenes")
data("dxd")
```

Format

ExonCountSet, CountDataSet

Source

Processed data from NCBI Gene Expression Omnibus under accession numbers GSM461176 to GSM461181.
