

# Reactome Pathway Analysis

Guangchuang Yu

Jinan University, Guangzhou, China

November 2, 2012

## 1 Introduction

This package is designed for reactome pathway-based analysis. Reactome is an open-source, open access, manually curated and peer-reviewed pathway database.

In *ReactomePA*, we plan to implement:

- pathway enrichment analysis
- gene set enrichment analysis
- functional subpathway (active or perturbed subpathway) detection
- methods for visualization.

## 2 Pathway Enrichment Analysis

Enrichment analysis is a widely used approach to identify biological themes. Here, we implement hypergeometric model to assess whether the number of selected genes associated with reactome pathway is larger than expected. We also implement a category net model for viusalization.

- Hypergeometric model

Hypergeometric model was implemented to assess whether the number of selected genes associated with reactome pathway is larger than expected.

- Category Net Plot

Category-gene network model was implemented to extract the complex relationships between genes and pathways. It provides a high-level model to understand the functionalities of genes.

- Case Study

Here, we used a vector of sample entrezgene ID, which was converted from an example list of genes from ProfCom <http://webclu.bio.wzw.tum.de/profcom/examples.php>.

```
> require(ReactomePA)
> data(sample)
> sample
```

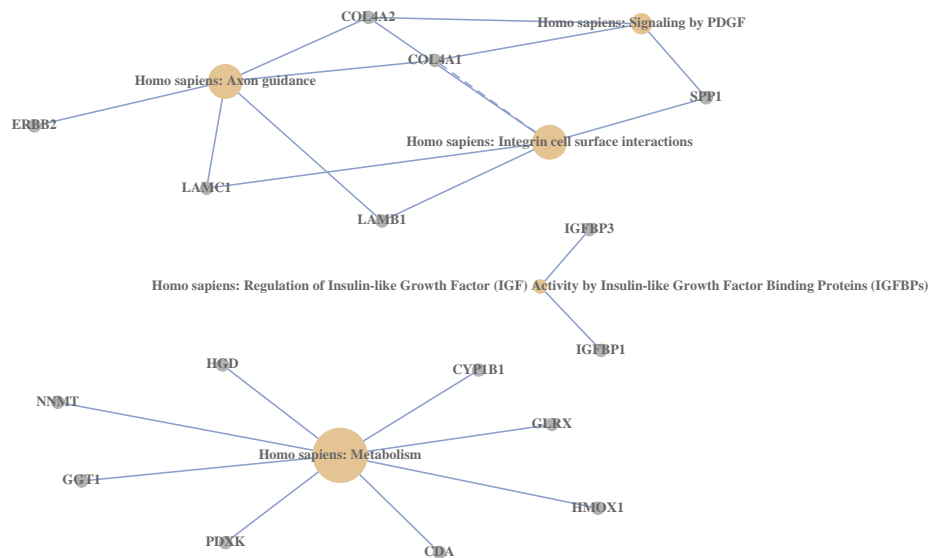

Figure 1: Visualization of Pathway enrichment analysis

- Compatible with *clusterProfiler* Bioconductor package *clusterProfiler* designed visualization for comparing biological themes among gene clusters (Yu et al., 2012). More details and parameters are described in the documentation (`Rfunction?compareCluster`). Figure 2 has been generated using the data, as in Yu et al. (2012).

### 3 Gene Set Enrichment Analysis

To be developed.

### 4 Session Information

The version number of R and packages loaded for generating the vignette were:

R version 2.15.2 (2012-10-26)

Platform: i386-apple-darwin9.8.0/i386 (32-bit)

locale:

[1] C/en\_US.US-ASCII/en\_US.US-ASCII/C/en\_US.US-ASCII/en\_US.US-ASCII

attached base packages:

[1] stats graphics grDevices utils datasets  
[6] methods base

other attached packages:

[1] org.Hs.eg.db\_2.8.0 ReactomePA\_1.2.1  
[3] DOSE\_1.4.0 AnnotationDbi\_1.20.2  
[5] Biobase\_2.18.0 BiocGenerics\_0.4.0
