Package 'NanoporeRNASeq'

February 18, 2025

Type Package

Title Nanopore RNA-Seq Example data

Version 1.17.0

Description The NanoporeRNASeq package contains long read RNA-Seq data
generated using Oxford Nanopore Sequencing. The data consists of 6 samples
from two human cell lines (K562 and MCF7) that were generated by the SG-NEx
project. Each of these cell lines has three replicates, with 1 direct RNA
sequencing data and 2 cDNA sequencing data. Reads are aligned to chromosome
22 (Grch38) and stored as bam files. The original data is from the SG-NEx
project.

Contents

HsChr22BambuAnnotation

BambuAnnotation of the first half of Human Sapiens Chr22

Description

Annotation GRangesList prepared from bambu for Granges of human genome (Grch38) chromosome 22 (1:25409234)

Usage

```
data("HsChr22BambuAnnotation")
```

Format

SummarizedExperiment

NanoporeRNASeq   *NanoporeRNASeq package with long-read RNA sequencing data*

Description

The NanoporeRNASeq package contains long-read RNA-Seq data generated using Oxford Nanopore Sequencing. The data consists of 6 samples from two human cell lines (K562 and MCF7). Each of these cell lines has three replicates, with 1 direct RNA sequencing data and 2 cDNA sequencing data. Reads are aligned to chromosome 22 (Grch38) and stored as bam files. The original data is from the SG-NEx project. Please see the package vignette for examples and use cases.

Details

Data objects include:

- SGNexSamples - sample information of the bam files
- HsChr22BambuAnnotation - annotation GRangesList

For detailed information on usage, see the package vignette, by typing vignette("NanoporeRNASeq"), or the workflow linked to on the first page of the vignette.

SGNexSamples   *SG-Nex samples from Nanopore RNA-Seq*

Description

Sample information description for K562 and MCF7 samples from SG-Nex

Usage

```
data("SGNexSamples")
```

Format

DataFrame

Details

SGNexSamples is a DataFrame containing the following information:

- sample_id - sample names of the bam files
- Platform - sequencing platform
- cellLine - cell line used
- protocol - sequencing protocols
- cancer_type- cancer type of the cell line
