

# Package ‘muscle’

February 2, 2026

**Type** Package

**Title** Multiple Sequence Alignment with MUSCLE

**Version** 3.53.0

**Date** 2012-10-05

**Author** Algorithm by Robert C. Edgar. R port by Alex T. Kalinka.

**Maintainer** Alex T. Kalinka <[alex.t.kalinka@gmail.com](mailto:alex.t.kalinka@gmail.com)>

**Description** MUSCLE performs multiple sequence alignments of nucleotide or amino acid sequences.

**biocViews** MultipleSequenceAlignment, Alignment, Sequencing, Genetics, SequenceMatching, DataImport

**Depends** Biostrings

**License** Unlimited

**URL** <http://www.drive5.com/muscle/>

**LazyLoad** yes

**LazyData** yes

**NeedsCompilation** yes

**git\_url** <https://git.bioconductor.org/packages/muscle>

**git\_branch** devel

**git\_last\_commit** e0bf042

**git\_last\_commit\_date** 2025-10-29

**Repository** Bioconductor 3.23

**Date/Publication** 2026-02-01

---

**muscle-package** *Multiple Sequence Alignment*

---

## Description

MUSCLE performs multiple sequence alignments of nucleotide and amino acid sequences.

## Details

Details about the algorithm can be found on the MUSCLE website:  
<http://www.drive5.com/muscle/>

## Author(s)

Algorithm: Robert C. Edgar

R port: Alex T. Kalinka <alex.t.kalinka@gmail.com>

## References

Edgar, R.C. (2004) MUSCLE: multiple sequence alignment with high accuracy and high throughput. *Nucleic Acids Res* **32**, 1792-1797.

## See Also

[muscle](#), [umax](#)

## Examples

```
## Align sequences in an XStringSet object.  
## Not run:  
aln <- muscle(stringset = umax)  
  
## End(Not run)
```

---

**muscle** *Multiple Sequence Alignment*

---

## Description

MUSCLE performs multiple sequence alignments of nucleotide or amino acid sequences.

## Usage

```
muscle(stringset, quiet = FALSE, ...)
```

## Arguments

stringset	An object of class <a href="#">XStringSet</a> : <a href="#">DNAMultipleAlignment</a> , <a href="#">RNAMultipleAlignment</a> , or <a href="#">AAMultipleAlignment</a> .
quiet	Logical, whether to prevent printing of the progress of the algorithm to the screen. Defaults to FALSE.
...	Arguments (options and flags) for the MUSCLE algorithm (see Details).

## Details

Arguments for the MUSCLE algorithm are either options or flags. Options take a variety of values, but flags are always logicals (TRUE or FALSE). All options and flags are explained in detail on the MUSCLE website: [http://www.drive5.com/muscle/muscle\\_userguide3.8.html](http://www.drive5.com/muscle/muscle_userguide3.8.html)

## Value

Output is an object of class [MultipleAlignment](#): [DNAMultipleAlignment](#), [RNAMultipleAlignment](#), or [AAMultipleAlignment](#).

## Note

For further details see the MUSCLE website: <http://www.drive5.com/muscle/>

## Author(s)

Algorithm by Robert C. Edgar. Ported into R by Alex T. Kalinka <alex.t.kalinka@gmail.com>

## References

## See Also

[umax](#)

## Examples

```
## Align sequences in an XStringSet object.
aln <- muscle(stringset = umax)

## Switch on the diags flag.
aln <- muscle(stringset = umax, diags = TRUE)
```

---

umax

---

*Unaligned MAX sequences*

---

### Description

Unaligned DNA sequences of the MAX gene for 31 mammalian species.

### Usage

umax

### Format

An object of class [DNAStringSet](#).

### Value

An object of class [DNAStringSet](#).

### Source

<http://www.ensembl.org/index.html>

### References

Wagner, AJ et al. (1992) Expression, regulation, and chromosomal localization of the Max gene. *Proc Natl Acad Sci USA* **89**: 3111-3115.
