February 2, 2026

Type Package

Title Visualization of Phylogenetic Networks

Version 1.17.0

Description Offers functions for plotting split (or implicit) networks (unrooted, undirected) and explicit networks (rooted, directed) with reticulations extending. 'ggtree' and using functions from 'ape' and 'phangorn'. It extends the 'ggtree' package [Yu2017] to allow the visualization of phylogenetic networks using the 'ggplot2' syntax. It offers an alternative to the plot functions already available in 'ape' Paradis and Schliep (2019) <[doi:10.1093/bioinformatics/bty633](https://doi.org/10.1093/bioinformatics/bty633)> and 'phangorn' Schliep (2011) <[doi:10.1093/bioinformatics/btq706](https://doi.org/10.1093/bioinformatics/btq706)>.

Depends R (>= 4.1), ggplot2 (>= 3.0.0), ggtree

Imports ape (>= 5.0), phangorn (>= 2.12), rlang, utils, methods, dplyr

Suggests tinytest, BiocStyle, ggimage, knitr, rmarkdown
