Package 'AWAggregatorData'

February 3, 2026

Type Package

Title Attribute-Weighted Aggregation Data

Version 1.1.0

Description The AWAggregatorData package contains the data associated with the
AWAggregator R package. It includes two pre-trained random forest models,
one incorporating the average coefficient of variation as a feature, and
the other one not including it. It also contains the PSMs in Benchmark Set
1~3 derived from the psm.tsv output files generated by FragPipe, which are
used to train the random forest models.

loadQuantInaccuracyModel

Load a Pre-trained Random Forest Model

Description

Loads a pre-trained random forest model for predicting the level of quantitative inaccuracy of PSMs.

Usage

```
loadQuantInaccuracyModel(useAvgCV = TRUE)
```

Arguments

useAvgCV   A logical value indicating whether the average CV attribute was used in the training.

Value

The pre-trained random forest model.

Examples

```
regr <- loadQuantInaccuracyModel(useAvgCV=TRUE)
```
