

# Package ‘MBAmethyl’

June 5, 2026

**Type** Package

**Title** Model-based analysis of DNA methylation data

**Version** 1.47.0

**Date** 2014-10-03

**Author** Tao Wang, Mengjie Chen

**Maintainer** Tao Wang <tao.wang.tw376@yale.edu>

**Description** This package provides a function for reconstructing DNA methylation values from raw measurements. It iteratively implements the group fused lars to smooth related-by-location methylation values and the constrained least squares to remove probe affinity effect across multiple sequences.

**Depends** R (>= 2.15)

**License** Artistic-2.0

**biocViews** DNAMethylation, MethylationArray

**git\_url** <https://git.bioconductor.org/packages/MBAmethyl>

**git\_branch** devel

**git\_last\_commit** 0cf2026

**git\_last\_commit\_date** 2026-04-28

**Repository** Bioconductor 3.24

**Date/Publication** 2026-06-04

MBAmethyl-package      *Model-based analysis of DNA methylation data*

---

## Description

This package provides functions for reconstructing DNA methylation values from raw measurements. It utilizes both the information from biological replicates and neighboring probes by explicitly modeling the probe-specific effect and encouraging the neighboring similarity by a group fused lasso penalty.

## Details

Package: MBAmethyl  
 Type: Package  
 Version: 0.99.0  
 Date: 2014-08-24  
 License: Artistic-2.0

**MBAmethyl***Model-based analysis of DNA methylation data*

---

### Description

This function reconstructs DNA methylation values from raw measurements. It iteratively implements the group fused lars to smooth related-by-location methylation values and the constrained least squares to remove probe affinity effect across multiple sequences. It also contains a criterion-based method (AIC or BIC) for selecting the tuning parameter.

### Usage

```
MBAmethyl(Y, wts = .defaultWeights(nrow(Y)), steps = min(dim(Y)) - 1)
```

### Arguments

|       |   |
|-------|---|
| Y     | An observed matrix (p x n) of methylation values (beta values); p is the number of probes and n is the number of samples;                               |
| wts   | A pre-specified vector of weights. By default, we use the probe index-dependent weight scheme, $wts_i = \sqrt{p / i / (p - i)}$ for $i = 1, \dots, p$ ; |
| steps | Limit the number of steps taken. One can use this option to perform early stopping.   |

### Value

|         |  |
|---------|--|
| ans.aic | A list corresponds to the AIC, containing estimated beta values, estimated probed effects, estimated change-point locations, residual sum of squares, and degree of freedom. |
| ans.bic | A list corresponds to the BIC, containing estimated beta values, estimated probed effects, estimated change-point locations, residual sum of squares, and degree of freedom. |
